

Wastewater Treatment Plant North Shore. New Zealand

2001

FIBREGLASS RECTANGULAR TANK COVERS

The North Shore wastewater treatment plant sedimentation tank cover project was completed by Maskell in 2001. The clear access hatches allow inspection of the spray nozzles within the tank and the complete cover may be removed using a lifting frame for tank maintenance.

The covers are exposed to the aggressive, primary effluent environment within the tanks with considerable hydrogen sulphide and resulting sulphuric acid condensate present.

Covers manufactured from teraphthalic polyester resin, E-glass reinforcement with isophthalic gelcoat externally

Industry Sector:	Wastewater
Diameter:	5.6m x 2.8m
Construction:	Molded
Resin:	Isophthalic polyester
No. off:	56
