

**Anchor Products
Lichfield Putaruru. New Zealand**

May 2001

**THE FIRST HYGIENIC GRP TANKS
IN NEW ZEALAND**

Two 200m³ tanks were supplied to the Anchor Products site in Lichfield for their powder milk expansion. The two tanks are to store polished water, and because of the Anchor policy, are hygienic tanks. Our GRP tanks have a naturally polished internal surface, and extra care was taken with the fittings for the tank.

The two tanks were supplied and installed by Maskell Productions Ltd and came complete with handrails and an interconnecting platform between the tanks.

All internal surfaces, including the overflow and vent, are able to be cleaned during the CIP process. In addition to these tanks a chemical storage tank has been installed on site, to store Hydrochloric Acid, used in the cleaning process.

Industry Sector:	Dairy
Diameter:	4.5m
Height:	14m
Construction:	Filament Wound
No. off:	Ladders/handrails
