LARGEST DIAMETER GRP TANKS IN NEW ZEALAND

Last year due to expansion, a 6.4m dia. 150,000 litre overflow tank was supplied to Anchor Products in Hamilton. On site were two existing steel tanks that had rusted badly, so a decision was made to install a third tank, manufactured in a different material.

The tank was supplied and installed on a new concrete base, with interconnecting piping. The trial has proved successful because this year we supplied two 6.4m dia. tanks to replace the existing steel tanks.

Logistically, manufacturing the tanks was reasonably straight forward, but we had to remove the end wall of the factory to get the tanks outside.

The tanks were manufactured in our yard in Mt Wellington, Auckland, and transported to site where our crew installed and piped up the tanks.

In this case, as is with most tank jobs these days, we both manufacture and install the tanks, and so provide a complete one stop shop for chemical and waste storage tanks.

Industry Sector:	Dairy
Diameter:	6.4m
Height:	4.5m
Construction:	Filament Wound
Resin:	Terephthalic Nuplex N7878
Design Code:	BS4994, NZS4203
