

Queenstown District Council Wanaka. New Zealand

20kL WASTEWATER PUMP STATION

Supply of a packaged pump station for the new Mtlron subdivision. It was supplied as a one piece item and installed within one day. The pumps had been pre-installed along with internal pipe work, guide rails and aluminium lids. Connections were made to a valve box and the inlet and outlet pipes. The pump station would be responsible for the storage and pumping of wastewater.

The tank design was completed by Maskell and included anchoring calculations for with poured concrete slab. Tank was designed for area with light trafficable loads only.

Pump station manufactured from teraphthalic polyester resin, E-glass reinforcement using Owens Corning Tank technology.

Industry Sector:	Wastewater
Diameter:	2m
Length:	6.5m
Construction:	Ribbed pipe
